

PLASTINATED BODY SLICES

Specimens are dissected from a real body and own their unique feature. Considering the individual difference of anatomical structures, any picture shown here should not be used as standard.

BSP0001

Horizontal Slices of Male Torso

A body trunk without head, neck and limbs is taken from a male body and is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. After plastination, each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0002

Horizontal Slices of Male Body

A male body, except the portions of hands and feet, is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. The hands are sectioned along with a coronal plane, but the feet sectioned along with a sagittal plane. After plastination, each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0003

Horizontal Slices of Female Torso

The sectioning and installation are similar to those of BSP0001.

BSP0004

Horizontal Slices of Female Body

The sectioning and installation are similar to those of BSP0002.

BSP0005

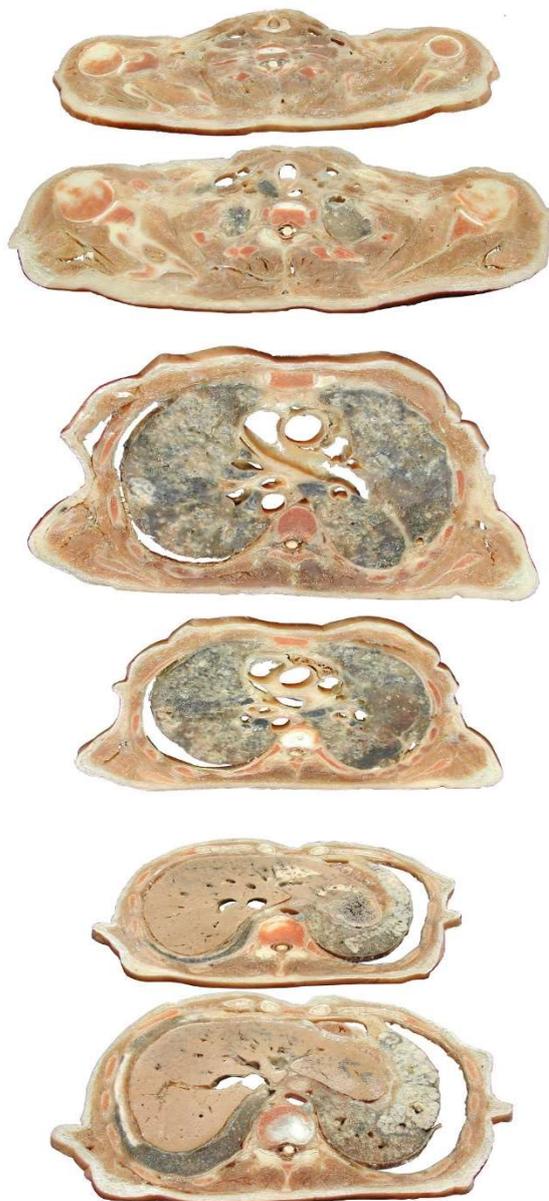

Horizontal Slices of Head

A human head is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 15-18 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0006

Horizontal Slices of Thorax

A human thorax is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 18-20 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0007

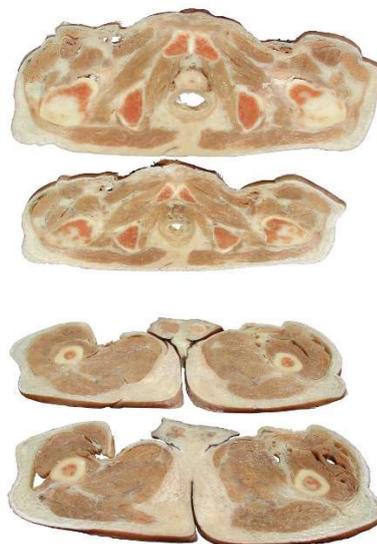

Horizontal Slices of Abdomen

A human lumbar region is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 18-20 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0008

Horizontal Slices of Hip

A human hip is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 15-18 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0009

Horizontal Slices of Upper Limb

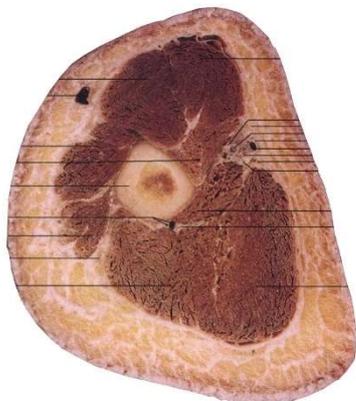

A human upper limb is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 18-20 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0010

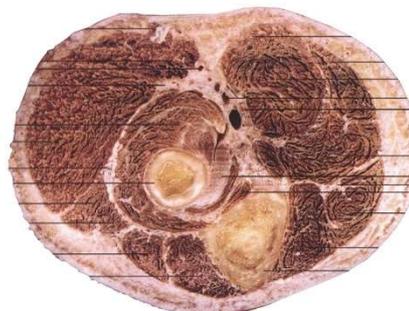

Horizontal Slices of Arm

A human arm is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 8-10 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0011

Horizontal Slices of Forearm

A human forearm is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 8-10 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0012

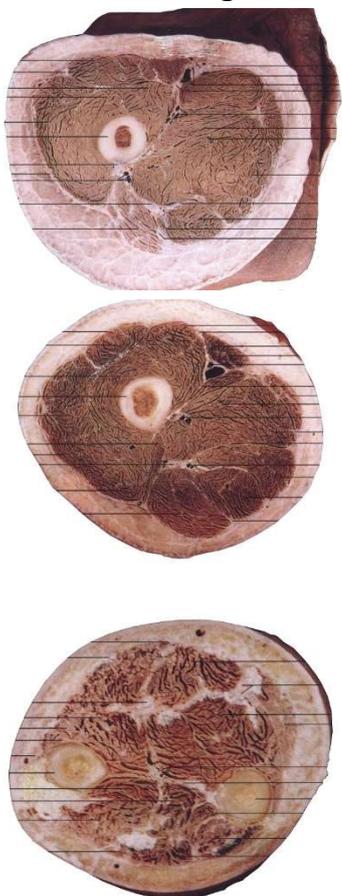

Horizontal Slices of Lower Limb

A human lower limb is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 36-40 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0013

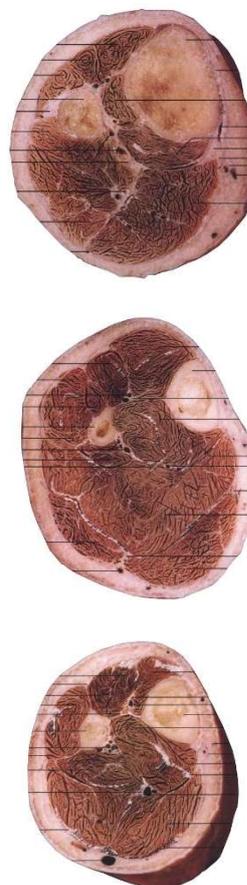

Horizontal Slices of Thigh

A human thigh is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 12-15 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0014

Horizontal Slices of Leg

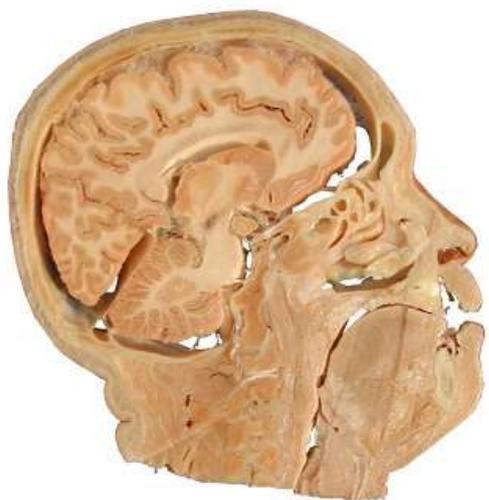

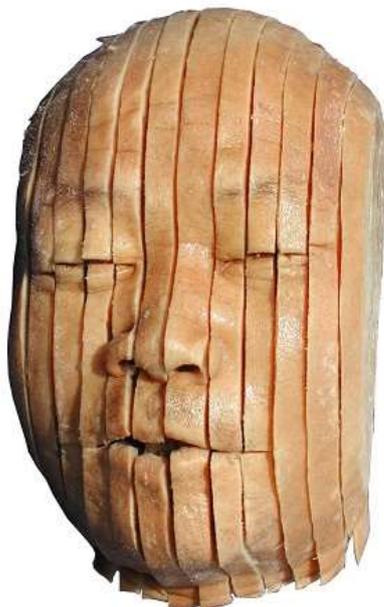

A human thigh is sectioned sequentially along with a horizontal plane at a thickness of 1 cm. There are 8-10 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0015

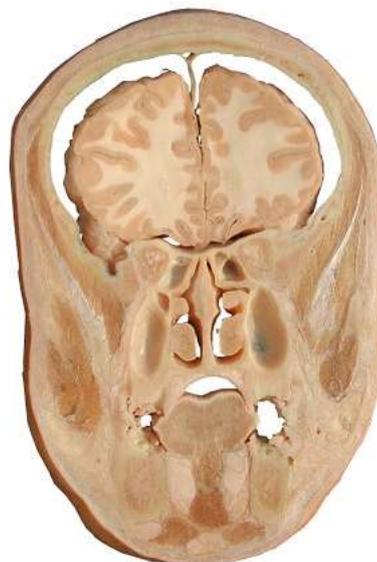

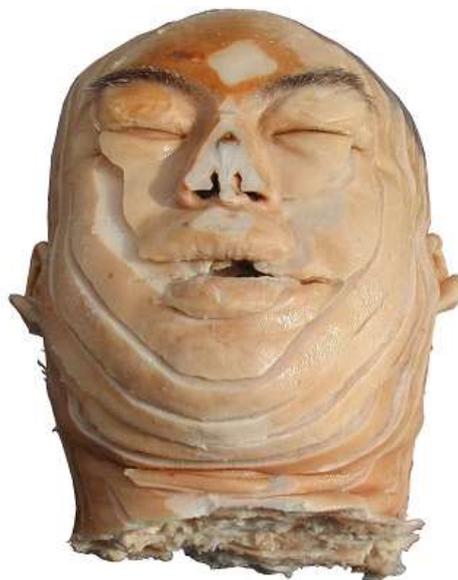

Sagittal Slices of Head

A human head is sectioned sequentially along with a sagittal plane at a thickness of 1 cm. There are 12-15 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0016

Coronal Slices of Head

A human head is sectioned sequentially along with a coronal plane at a thickness of 1 cm. There are 12-15 slices in total. After plastination, each slice is sealed within a Plexiglas case for viewing. A display rack and a storage case are provided.

BSP0017

Sagittal Male Torso Slices

A body trunk with head and neck is sectioned sequentially along with a sagittal plane at a thickness of 2.5 cm. In total, 6 slices are taken from the intermediate portion for plastination. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0018

Sagittal Female Torso Slices

A female body trunk with head and neck is sectioned sequentially along with a sagittal plane at a thickness of 2.5 cm. In total, 6 slices are taken from the intermediate portion for plastination. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0019

Coronal Male Torso Slices

A male body trunk with head and neck is sectioned sequentially along with a coronal plane at a thickness of 2.5 cm. In total, 4 slices are taken from the intermediate portion for plastination. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0020

Coronal Female Body Slices

A female body trunk with head and neck is sectioned sequentially along with a coronal plane at a thickness of 2.5 cm. In total, 4 slices are taken from the intermediate portion for plastination. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0021

Sagittal Slices of Male Torso with Lower Limbs

A male body without upper limbs is sectioned sequentially along with a sagittal plane at a thickness of 1.5 cm. There are 16-20 slices in total. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0022

Sagittal Slices of Female Torso with Lower Limbs

A female body without upper limbs is sectioned sequentially along with a sagittal plane at a thickness of 1.5 cm. There are 16-20 slices in total. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0023

Coronal Slices of Male Torso with Lower Limbs

A male body without upper limbs is sectioned sequentially along with a coronal plane at a thickness of 1.5 cm. There are 12-15 slices in total. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0024

Coronal Slices of Female Torso with Lower Limbs

A female body without upper limbs is sectioned sequentially along with a coronal plane at a thickness of 1.5 cm. There are 12-15 slices in total. Each slice is sealed within a Plexiglas case for viewing. Optionally, all slices can be arranged sequentially and installed in a stainless framed stand for display. Within the installation, each slice is allowed to be swung freely at a vertical axis.

BSP0025

Sagittal Slices Knee Joint

A segment of lower limb between the 10 cm above the knee and 10 cm below the knee is sectioned sequentially along with a sagittal plane at a thickness of 1 cm.

BSP0026

Sagittal Slices of Elbow Joint

A segment of upper limb between the 10 cm above the elbow and 10 cm below the elbow is sectioned sequentially along with a sagittal plane at a thickness of 1 cm.
